

# CloudSOC™

## for Microsoft Azure

### Security for Azure

Do you want to make sure your Azure accounts are secure and have not been compromised? What are your risks if a malicious insider or an external bad actor uses your Azure for their own purposes? Do you have the visibility and control you need to make sure this doesn't happen?

**See how CloudSOC can keep your Azure accounts secure.**

Symantec Corporation (NASDAQ: SYMC), the world's leading cyber security company, helps businesses, governments and people secure their most important data wherever it lives. Organizations across the world look to Symantec for strategic, integrated solutions to defend against sophisticated attacks across endpoints, cloud and infrastructure. Likewise, a global community of more than 50 million people and families rely on Symantec's Norton suite of products for protection at home and across all of their devices. Symantec operates one of the world's largest civilian cyber intelligence networks, allowing it to see and protect against the most advanced threats. ## Security Risk

Monitor users and action in Azure to quickly identify and act on abnormal or malicious activity.

## User Centric ThreatScore

Account takeovers and malicious insiders can put your organization at risk. Machine learning based User Behavior Analysis assigns a ThreatScore to each and every user, enabling you to identify and act on risky users.

Safeguard your Azure account from hackers and malicious insiders using your infrastructure for their purposes. Identify malicious activity and eliminate unsanctioned activities, virtual machines and servers.

## Policy Definition

The screenshot shows the Symantec Protect interface for defining a policy. The main header includes 'Protect' and a '+ New' button. Below the header, there are tabs for 'Policies', 'Blocked Users', and 'Alerts'. The 'Policies' tab is active, showing a list of policies. The selected policy is 'Azure - Launch Instance or Security Group Change'. The policy details are shown in a right-hand pane, including the policy name, 'Edit', 'Clone', and 'Active' status. The policy is active and has a 'ThreatScore' rule set to 'Higher than 50'. The 'Responses' section shows a 'Log Policy Match' response with a 'Severity Level CRITICAL'.

Define security policies to automatically alert and remediate risks as they occur and prevent unsanctioned activity.

## Real-time Enforcement

The screenshot shows the real-time enforcement details for a policy. The 'Rules' section includes 'Cloud Services' (Any), 'Users & Groups' (RSA Five User, RSA Four User, RSA One User, and 2 more users), and 'ThreatScore' (Higher than 60). The 'Responses' section shows a 'Notify' response (Email admin) and a 'Log Policy Match' response with a 'Severity Level CRITICAL'.

Prevent security incidents with real-time enforcement policies triggered by elevated ThreatScores.

# Incident Response

Azure Events					
Source: Securlets (Azure)   Duration: None ( Showing 100 of 100,074 )					
Event Date/Time	Activity Type	Severity	Instance	User	Object Type
Dec 06, 2016, 12:46:...	Put	Informational	466970343994	admin@company.com	Bucket Notification
Dec 06, 2016, 12:41:0...	Put	Informational	466970343994	admin@company.com	Bucket Notification

Dec 06, 2016, 12:37:...	Get	Informational	466970343994	admin@company.com	Bucket Policy
Dec 06, 2016, 12:37:...	Get	Informational	466970343994	admin@company.com	Bucket Website
Dec 06, 2016, 12:37:...	Get	Informational	466970343994	admin@company.com	Bucket Tagging

Go back in time and investigate a specific user or activity, correlate events and discover what really happened with powerful search and data visualization tools or export granular log data to your SIEM system for analysis.

Peace of mind comes when CloudSOC is watching over your Azure account to safeguard your assets and your organization.

It's easy to get going! Just connect to CloudSOC Security for Azure. Get the Azure Securlet API, you will have visibility and control over your Azure account in minutes. Add the CASB Gateway with the Azure Gatelet for additional levels of security.
